

ANDRES BODINGTON

(828)-319-1177 | aebodington27@gmail.com | Chicago, IL | LinkedIn | GitHub

HIGHLIGHTS OF QUALIFICATIONS

- Computer Science student (GPA 4.0/4.0) graduating May 2027, based in the Chicago area and open to Chicago or New York
- Strong foundation in data structures, algorithms, and object-oriented design, applied in Java, C++, and Python through coursework and production internship work
- Built and shipped real-time, event-driven backend systems at Andrómeda Ventures, enforcing hard per-user cost limits on live services with no added latency
- Demonstrated record of success: Dean's List every semester, Second Team Scholar All-America swimmer, and three-event school record holder — used to competing and improving alongside driven teammates
- Bilingual in Spanish and English; semi-fluent in Portuguese, with strong written and verbal communication skills

EDUCATION

Lewis University, Romeoville, IL

August 2025 – May 2027 (expected)

Bachelor of Science in Computer Science, GPA: 4.0/4.0

Relevant coursework: Data Structures and Algorithms, Object-Oriented Programming, Software Engineering, Database Design, Cryptography, Cybersecurity Essentials

Mars Hill University, Mars Hill, NC

August 2023 – May 2025

Bachelor of Science in Computer Science, GPA: 3.96/4.0 — Dean's List (Fall 2023, Spring 2024, Fall 2024, Spring 2025)

TECHNICAL SKILLS

Programming Languages: Java, C++, Python, TypeScript, SQL, JavaScript

Core Concepts: Data Structures and Algorithms, Object-Oriented Programming, Concurrency and Multi-threading, Distributed and Event-Driven Systems, Design Patterns, Unit Testing

Frameworks & Technologies: Spring Boot, NestJS, LangChain, REST APIs, WebSockets, PostgreSQL, JSON

Tools & Platforms: Git, GitHub, Linux, Windows, macOS, VMWare, Microsoft Office

EXPERIENCE

Andrómeda Ventures — Software Engineering Intern

June 2026 – August 2026

- Designed and shipped backend services for two production applications (Mandarina Tec and Tribu Deportiva) serving live user traffic, with a focus on latency, reliability, and cost per request
- Built a real-time rate limiter enforcing a hard \$0.10 per-user spend cap with automated alerts at 80% of budget, preventing overruns without blocking legitimate requests
- Re-architected an HTTP integration onto a persistent WebSocket connection, moving spend calculation off the request path so tracking added zero measurable latency
- Refactored deeply nested logic into the Repository Pattern with custom framework wrappers, centralizing error handling and bringing the module to full unit-test coverage
- Profiled and tuned request payloads and API configuration to cut token usage per transaction while holding output quality constant
- Evaluated competing architectures against measured accuracy benchmarks and implemented the winning design, reducing incorrect outputs by over 70%
- Defended design decisions in code review under production standards set by senior engineers, iterating from working code to production-ready code

PROJECTS

AquaAnalytics – Swim Performance Analytics REST API (Java, Spring Boot, PostgreSQL)

- Built a multi-tenant REST API with schema-level tenant isolation, tracking 50+ athletes and 200+ events for coaching staff
- Implemented statistical analytics endpoints computing improvement rates, fatigue indicators, and split consistency scores over 10,000+ race results
- Automated results ingestion by parsing meet PDFs with Apache PDFBox, applying fuzzy name matching to reconcile records and cutting manual data entry by 90%

HONORS, LEADERSHIP, AND ACTIVITIES

- Second Team Scholar All-America 2025; Scholastic All-America 2024; recipient, Merit Transfer Scholarship, 2025–Present
- Eight-time conference finalist and Mars Hill University school record holder (500, 1000, 1650 Freestyle); Lewis University Men's Swim Team (2025–Present)
- Member, Lewis University AI and Data Science Club and Cybersecurity Club (August 2025 – Present)
- Red Cross Volunteer, Marshall, NC (September–October 2024): Assisted in Hurricane Helene's recovery efforts
